

Results:
The Lexicon method is most accurate by all measurements
Difference between Signed and Unsigned hashes are negligible
Hash accuracy peaks at a table size of around 8000.
Hash accuracy _decreases_ with table sizes larger than the lexicon. This is unexpected.
Hash speed is approx 3x faster than Lexicon speed for hash table size 8000

"Lexicon" - uses a lexicon of the test set

instead of hash tables

10000
